## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 4\_Q4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Arjun is learning how to filter words from a sentence based on grammar rules. He wants to identify the valid words in a sentence.

A word is considered valid if it satisfies all these conditions:

The word contains only alphabets (a-z, A-Z). The word length is at least 2 characters. The word should not contain digits or special characters.

Your task is to read a sentence and print all the valid words in it.

##### ***Input Format***

The input contains a single line containing a sentence S.

##### ***Output Format***

The output prints all the valid words separated by spaces.

If no valid word exists, print "No valid words."

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: Hello world1 123 ab" @\$ Hi

Output: Hello Hi

### **Answer**

```
// You are using Java
```

```
import java.util.Scanner;
```

```
class ValidWordsFilter {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        String sentence = scanner.nextLine();  
        String[] words = sentence.split(" ");
```

```
        boolean foundValid = false;
```

```
        for (String word : words) {  
            if (isValidWord(word)) {  
                System.out.print(word + " ");  
                foundValid = true;  
            }  
        }
```

```
        if (!foundValid) {  
            System.out.println("No valid words.");  
        } else {  
            System.out.println();  
        }
```

```
        scanner.close();  
    }
```

```
    private static boolean isValidWord(String word) {
```

```
    if (word.length() < 2) {  
        return false;  
    }  
    for (char ch : word.toCharArray()) {  
        if (!Character.isLetter(ch)) {  
            return false;  
        }  
    }  
    return true;  
}  
}
```

**Status :** Correct

**Marks :** 10/10
